So, some won't even power up, and some may power up and still not be recognized.. There are a few solutions: 1) Get a power supply for the external hard drive 2) Get a powered USB hub that your hard drive would plug into 3) Get a special USB cable that has two plugs to use both Powerbook USB ports 4) Connect via Firewire.. However, it seems to be broken in a weird way After some attempts I managed to get macOS to recognize the drive and showing it in the finder - but after a few seconds it beeps one time and the drive sort of freezes.

Hello kind people of MacRumors, Today is a sad day! I got home as per usual and connected my external harddrive in order to transfer some files to it.. Word for mac 2016 unlock document Any of you got any idea of what I can do here? Quick video of the issue: Thanks in advance! Assume you are trying to connect via USB? Powerbooks don't put out enough juice on USB to power many devices.. The My Passport For Mac device works straight out of the box with Mac computers and is Apple Time Machine ready so you can easily get going.. With a Powerbook, this is preferred, because you can boot from a Firewire device, which you cannot do with a USB-only device. [Tabledit Manual V2.77 For Mac](#)
